

# Biology - Animals, including humans

Subject Specific Vocabulary		Associated Diagram	Sticky Knowledge	
herbivore	An animal that eats plants		Using scientific vocabulary, explain what the digestive system is.	
carnivore	An animal that feeds on other animals.		A system of organs that get food in and out of the body and which make use of the food to keep the body healthy.	
omnivore	An animal that eats plants and animals.		What is the function of the stomach? Produce acid to break food down for digestion	
producer	.A plant that produces its own food		What is the function of the premolar and molar teeth? Crush and grind food	
predator	An animal that hunts and eats other animals.		What is the function of the canine teeth? Tear and rip food	
prey	An animal that gets hunted and eaten by another animal.		What is the function of the incisor teeth? Bite and cut food	
digest	Break down food so it can be used by the body.		Write two ways that humans can prevent tooth decay. Visit dentist regularly, brush teeth twice a day, limit sugary food and drinks	
oesophagus	A muscular tube which moves food from the mouth to the stomach.		Herbivore	Give an example of a producer in a food chain.  Any plant
stomach	An organ in the digestive system where food is broken down with stomach acid and by being churned around		omnivore	Give an example of a creature that could be both a predator <i>and</i> prey in a food chain.  Frog, mouse, small bird
small intestine	Part of the intestine where nutrients are absorbed into the body.			
large intestine	Part of the intestine where water is absorbed from remaining waste food. Stools are formed in the large intestine.		carnivore	
rectum	Part of the digestive system where stools are stored before leaving the body through the anus.
