

Associated Diagram

Can you complete the life cycle of a human?

Can you complete the life cycle of a frog?

Sticky Knowledge

What are the 3 basic needs of animals including humans for survival?

Food, air and water

Do all offspring look like their mothers? Explain how you know this.

No they only look like them when they give birth to live young. Some fish and amphibians produce offspring which doesn't look anything like them eg tadpole and frog.

What do offspring grow in to?

Adults.

Explain 3 things that animals and humans can do to grow up healthily?

Exercise regularly to keep our bodies fit and healthy,

Eat a healthy balanced diet to give us all the vitamins and nutrients our bodies need to grow and fight off illnesses.

Keep our bodies clean and have good hygiene to stop us from becoming dirty or unwell.

What will happen to our bodies if we do not exercise and eat healthily?

If we do not exercise we may become overweight as we are not burning off the energy in our bodies so it stores as fat.

If we do not eat healthily/a well balanced diet then we may also become overweight and our teeth may rot from too much sugar. We could also become poorly.

Science–Biology– Animals including humans

Subject Specific Vocabulary	Pre—vocab	Post– vocab
exercise	A physical activity that requires effort to improve health and fitness	
baby	A very young child	
child	A young human	
adult	A fully grown animal including human	
elderly	An older person	
toddler	the stage of life in between a baby and a child around the age of 2.	
teenager	An adolescent who is aged between 13 and 17 years old.	
lifecycle	The changes living things go through to become an adult	
nutrition	Food needed to live.	
hygiene	How clean something is.	
survival	Continuing to exist.	
offspring	The child of an animal.	
reproduce	When living things make a new living thing of the same kind.
